COVID-19 Public & Private Childcare Programs & K-12 Schools

WHO IS THIS GUIDANCE FOR?
This interim guidance is intended for administrators of public and private childcare programs and K-12 schools. Administrators are individuals who oversee the daily operations of childcare programs and K-12 schools, and may include positions like childcare program directors, school district superintendents, principals, and assistant principals. This guidance is intended for administrators at both the school/facility and district level.

WHY IS THIS GUIDANCE BEING ISSUED?
This guidance will help childcare programs, schools, and their partners understand how to help prevent the transmission of COVID-19 within childcare and school communities and facilities. It also aims to help childcare programs, schools, and partners react quickly should a case be identified. The guidance includes considerations to help administrators plan for the continuity of teaching and learning if there is community spread of COVID-19.

WHAT IS THE ROLE OF SCHOOLS IN RESPONDING TO COVID-19?
Schools, working together with local health departments, have an important role in slowing the spread of diseases to help ensure students have safe and healthy learning environments. Schools serve students, staff, and visitors from throughout the community. All of these people may have close contact in the school setting, often sharing spaces, equipment, and supplies.

Information about COVID-19 in children is somewhat limited, but the information that is available suggests that children with confirmed COVID-19 generally had mild symptoms. However, a small percentage of children have been reported to have more severe illness. People who have serious chronic medical conditions are believed to be at higher risk. Despite lower risk of serious illness among most children, children with COVID-19-like symptoms should avoid contact with others who might be at higher risk, such as older adults and adults with serious chronic medical conditions.

HOW SHOULD SCHOOLS PREPARE FOR, AND RESPOND TO, COVID-19?
Schools should be prepared for COVID-19 outbreaks in their local communities and for individual exposure events to occur in their facilities, regardless of the level of community transmission, for example a case associated with recent travel to an area with sustained COVID-19 transmission. The following decision tree can be used to help schools determine which set of mitigation strategies may be most appropriate for their current situation.
When a confirmed case has entered a school, regardless of community transmission

Any school in any community might need to implement short-term closure procedures regardless of community spread if an infected person has been in a school building. If this happens, CDC recommends the following procedures regardless of the level of community spread:

Coordinate with local health officials. Once learning of a COVID-19 case in someone who has been in the school, immediately notify local health officials. These officials will help administrators determine a course of action for their childcare programs or schools.
Dismiss students and most staff for 2-5 days. This initial short-term dismissal allows time for the local health officials to gain a better understanding of the COVID-19 situation impacting the school. This allows the local health officials to help the school determine appropriate next steps, including whether an extended dismissal duration is needed to stop or slow further spread of COVID-19.

- Local health officials’ recommendations for the scope (e.g., a single school, multiple schools, the full district) and duration of school dismissals will be made on a case-by-case basis using the most up-to-date information about COVID-19 and the specific cases in the community.
- During school dismissals, also cancel extracurricular group activities, school-based afterschool programs, and large events (e.g., assemblies, spirit nights, field trips, and sporting events).
- Discourage staff, students, and their families from gathering or socializing anywhere. This includes group childcare arrangements, as well as gathering at places like a friend’s house, a favorite restaurant, or the local shopping mall.

**COMMUNICATE WITH STAFF, PARENTS, AND STUDENTS. COORDINATE WITH LOCAL HEALTH OFFICIALS TO COMMUNICATE DISMISSAL DECISIONS AND THE POSSIBLE COVID-19 EXPOSURE.**

- This communication to the school community should align with the communication plan in the school’s emergency operations plan.
- Plan to include messages to counter potential stigma and discrimination.
- In such a circumstance, it is critical to maintain confidentiality of the student or staff member as required by the Americans with Disabilities Act and the Family Education Rights and Privacy Act.

**CLEAN AND DISINFECT THOROUGHLY.**

- Close off areas used by the individuals with COVID-19 and wait as long as practical before beginning cleaning and disinfection to minimize potential for exposure to respiratory droplets. Open outside doors and windows to increase air circulation in the area. If possible, wait up to 24 hours before beginning cleaning and disinfection.
- Cleaning staff should clean and disinfect all areas (e.g., offices, bathrooms, and common areas) used by the ill persons, focusing especially on frequently touched surfaces.
- If surfaces are dirty, they should be cleaned using a detergent or soap and water prior to disinfection.
- For disinfection most common EPA-registered household disinfectants should be effective.
  - A list of products that are EPA-approved for use against the virus that causes COVID-19 is available [here](#) Follow the manufacturer’s instructions for all cleaning and disinfection products (e.g., concentration, application method and contact time, etc.).
  - Additionally, diluted household bleach solutions can be used if appropriate for the surface. Follow manufacturer’s instructions for application and proper ventilation. Check to ensure the product is not past its expiration date. Never mix household bleach with ammonia or any other cleanser. Unexpired household bleach will be effective against coronaviruses when properly diluted. Prepare a bleach solution by mixing:
    - 5 tablespoons (1/3rd cup) bleach per gallon of water or
    - 4 teaspoons bleach per quart of water
- Additional information on cleaning and disinfection of community facilities such as schools can be found on [CDC’s website](#).
- Make decisions about extending the school dismissal. Temporarily dismissing childcare programs and K-12 schools is a strategy to stop or slow the further spread of COVID-19 in communities.
• During school dismissals (after cleaning and disinfection), childcare programs and schools may stay open for staff members (unless ill) while students stay home. Keeping facilities open: a) allows teachers to develop and deliver lessons and materials remotely, thus maintaining continuity of teaching and learning; and b) allows other staff members to continue to provide services and help with additional response efforts. Decisions on which, if any, staff should be allowed in the school should be made in collaboration with local health officials.

• Childcare and school administrators should work in close collaboration and coordination with local health officials to make dismissal and large event cancellation decisions. Schools are not expected to make decisions about dismissal or canceling events on their own. School dismissals and event cancellations may be extended if advised by local health officials. The nature of these actions (e.g., geographic scope, duration) may change as the local outbreak situation evolves.

• Administrators should seek guidance from local health officials to determine when students and staff should return to schools and what additional steps are needed for the school community. In addition, students and staff who are well but are taking care of or share a home with someone with a case of COVID-19 should follow instructions from local health officials to determine when to return to school.

IMPLEMENT STRATEGIES TO CONTINUE EDUCATION AND RELATED SUPPORTS FOR STUDENTS.

• Ensure continuity of education.

• Review continuity plans, including plans for the continuity of teaching and learning. Implement e-learning plans, including digital and distance learning options as feasible and appropriate.

• Determine, in consultation with school district officials or other relevant state or local partners:
  o If a waiver is needed for state requirements of a minimum number of in-person instructional hours or school days (seat time) as a condition for funding;
  o How to convert face-to-face lessons into online lessons and how to train teachers to do so;
  o How to triage technical issues if faced with limited IT support and staff;
  o How to encourage appropriate adult supervision while children are using distance learning approaches; and
  o How to deal with the potential lack of students’ access to computers and the Internet at home.

• Ensure continuity of meal programs.

• Consider ways to distribute food to students.

• If there is community spread of COVID-19, design strategies to avoid distribution in settings where people might gather in a group or crowd. Consider options such as “grab-and-go” bagged lunches or meal delivery.

• Consider alternatives for providing essential medical and social services for students.

• Continue providing necessary services for children with special healthcare needs, or work with the state Title V Children and Youth with Special Health Care Needs (CYSHCN) Program.

WHEN THERE IS NO COMMUNITY TRANSMISSION (PREPAREDNESS PHASE)
The most important thing to do now is plan and prepare. Administrators should reinforce healthy practices among their students and staff. As the global outbreak evolves, schools should prepare for the possibility of community-level outbreaks. Schools need to be ready if COVID-19 does appear in their communities. Here are some strategies:

Review, update, and implement emergency operations plans (EOPs). This should be done in collaboration with local health departments and other relevant partners. Focus on the components, or annexes, of the plans that address infectious disease outbreaks.
• Ensure the plan includes strategies to reduce the spread of a wide variety of infectious diseases (e.g., seasonal influenza). This includes strategies for social distancing and school dismissal that may be used to stop or slow the spread of infectious disease. The plan should also include strategies for continuing education, meal programs, and other related services in the event of school dismissal.

• Ensure the plan emphasizes everyday preventive actions for students and staff. For example, emphasize actions such as staying home when sick; appropriately covering coughs and sneezes; cleaning frequently touched surfaces; and washing hands often.
  o CDC has workplace resources such as posters with messages for staff about staying home when sick and how to avoid spreading germs at work.
  o Other health and education professional organizations may also have helpful resources your childcare facility or school can use or share. For example, the American Academy of Pediatrics provides information on germ prevention strategies and reducing the spread of illness in childcare setting.

• Reference key resources while reviewing, updating, and implementing the EOP:
  o Multiple federal agencies have developed resources on school planning and Emergency Management for Schools (REMS) Technical Assistance (TA) Center’s website contains free resources, trainings, and TA to schools and their community partners, including many tools and resources on emergency planning and response to infectious disease outbreaks.
  o Develop information-shar principles and a 6-step process for creating plans to build and continually foster safe and healthy school communities before, during, and after possible emergencies. Key resources include guidance on developing high-quality school emergency operations plans, and a companion guide on the role of school districts in developing high-quality school emergency operations plan.
  o The Readying systems with partners.

• Information-sharing systems can be used for day-to-day reporting (on information such as changes in absenteeism) and disease surveillance efforts to detect and respond to an outbreak.

• Local health officials should be a key partner in information sharing.

TEACH AND REINFORCE HEALTHY HYGIENE PRACTICES.

• Train staff on healthy hygiene practices so they can teach these to students.

• Ensure handwashing strategies include washing with soap and water for at least 20 seconds, especially after going to the bathroom; before eating; and after blowing your nose, coughing, or sneezing. If soap and water are not available and hands are not visibly dirty, use an alcohol-based hand sanitizer that contains at least 60% alcohol.

• CDC offers several free handwashing resources that include health promotion materials, information on proper handwashing technique, and tips for families to help children develop good handwashing habits.

• Ensure adequate supplies (e.g., soap, paper towels, hand sanitizer, tissue) to support healthy hygiene practices.

INTENSIFY CLEANING AND DISINFECTION EFFORTS.

• Routinely clean and disinfect surfaces and objects that are frequently touched. This may include cleaning objects/surfaces not ordinarily cleaned daily (e.g., doorknobs, light switches, classroom sink handles, countertops). Clean with the cleaners typically used. Use all cleaning products according to the directions on the label. For disinfection most common EPA-registered household disinfectants should be effective. A list of products that are EPA-approved for use against the virus that causes COVID-19 is
available here. Follow the manufacturer’s instructions for all cleaning and disinfection products (e.g., concentration, application method and contact time, etc.).

- Provide EPA-registered disposable wipes to teachers and staff so that commonly used surfaces (e.g., keyboards, desks, remote controls) can be wiped down before use.
- Ensure adequate supplies to support cleaning and disinfection practices.

MONITOR AND PLAN FOR ABSENTEEISM.

- Review the usual absenteeism patterns at your school among both students and staff.
- Alert local health officials about large increases in student and staff absenteeism, particularly if absences appear due to respiratory illnesses (like the common cold or the “flu,” which have symptoms similar to COVID-19).
- Review attendance and sick leave policies. Encourage students and staff to stay home when sick, even without documentation from doctors. Use flexibility, when possible, to allow staff to stay home to care for sick family members.
- Discourage the use of perfect attendance awards and incentives.
- Identify critical job functions and positions, and plan for alternative coverage by cross-training staff.
- Determine what level of absenteeism will disrupt continuity of teaching and learning.

ASSESS GROUP GATHERINGS AND EVENTS. CONSIDER POSTPONING NON-CRITICAL GATHERINGS AND EVENTS.

- Ensure you have a clear understanding of all upcoming gatherings and large events for your school community (e.g., assemblies, field days, spirit nights, athletic events). Give special consideration to events that might put students, staff, or their families in close proximity to others from communities that may have identified cases of COVID-19.
- Consider whether any of these events should be canceled. Speak with local health officials to help determine the best approach.

REQUIRE SICK STUDENTS AND STAFF TO STAY HOME. ESTABLISH PROCEDURES FOR STUDENTS AND STAFF WHO ARE SICK AT SCHOOL.

- Establish procedures to ensure students and staff who become sick at school or arrive at school sick are sent home as soon as possible.
- Keep sick students and staff, particularly those with symptoms of respiratory illness, separate from well students and staff until they can leave. Plan to have areas where these individuals can be isolated from well students and staff until they can leave the school.
- Remember that schools are not expected to screen students or staff to identify cases of COVID-19. If a community (or more specifically, a school) has cases of COVID-19, local health officials will help identify those individuals and will follow up on next steps.
- Share resources with the school community to help families understand when to keep children home. This guidance, not specific to COVID-19, from the American Academy of Pediatrics can be helpful for families.

CREATE AND TEST COMMUNICATIONS PLANS FOR USE WITH THE SCHOOL COMMUNITY.

- Include strategies for sharing information with staff, students, and their families.
- Include information about steps being taken by the school or childcare facility to prepare, and how additional information will be shared.
• Test communication capacity, and reiterate steps staff, students, and families can take to stay healthy and guidance that they should stay home if sick.

Please note, the Oklahoma State Department of Health (OSDH) encourages anyone who is experiencing flu-like symptoms, to self-quarantine for 14 days and report any concerning symptoms to a health care provider or call the OSDH Call Center at 877-215-8336.

The OSDH regularly updates the Oklahoma-specific COVID-19 website found at https://coronavirus@health.ok.gov.
